## Reflective Tape

New EU regulations for reflective tape

# Reflective tape

**From 2011, July 10th, all new trucks over 7,5 tonnes and longer than 6 meters, must be fitted with reflective tape on all sides and rear, according to EU Regulation No. ECE-48.**

At the rear you can choose between yellow or red reflective tape.

The reflective tape should be installed in all 4 sides.

On the sides, you can choose between yellow or white reflective tape.

The reflective tape should be mounted at the bottom and the top corners.

At least 80% of the length and width must be covered by reflex.

The reflective tape should be mounted from 0,25 m and up to 1,5 meters from the bottom.

The distance from the reflective tape and the brake light must be at least 20 cm.

There are 2 types of reflective tape: One for solid sides and a stronger for mounting on canvas. Both types are ECE-104 approved reflective.

## **Part Number:**

440095 – White, for the solid side

440098 – Yellow, for the solid side

440102 – Red, for the solid side

440153 – White, for canvas

440154 – Yellow, for canvas

440155 – Red, for canvas

## **Advantages of both:**

- Easy to install.
- Easy to cut, because the tape is produced in one layer.
- Can stand high pressure cleaning.
- Resistant to thrown-up pebbles. In case of thrown-up pebbels, the exposed area will still be able to reflect.
- The edges shall not be sealed when they are cut. It avoids thereby laminate cracking. After some years the reflective tape will still look virtually new.
