Flexibility without limits

# BevoPlan

## BevoPlan Flexibility without limits

BevoPlan is the optimal concept when it comes to maximum utilization of the stowage plan and thereby a better overall economy.

BevoPlan is developed to create order, systematization, safety and a better work environment. The concept of BevoPlan is supposed to be integrated into the construction as this is planned.

The possibilities of BevoPlan are immense and only imagination sets the limits for the options of combination. BevoPlan consists of a range of units which can be combined in various ways giving a flexible overall solution. The system can be utilized from the very simple to the extreme, according to current or future transport needs.

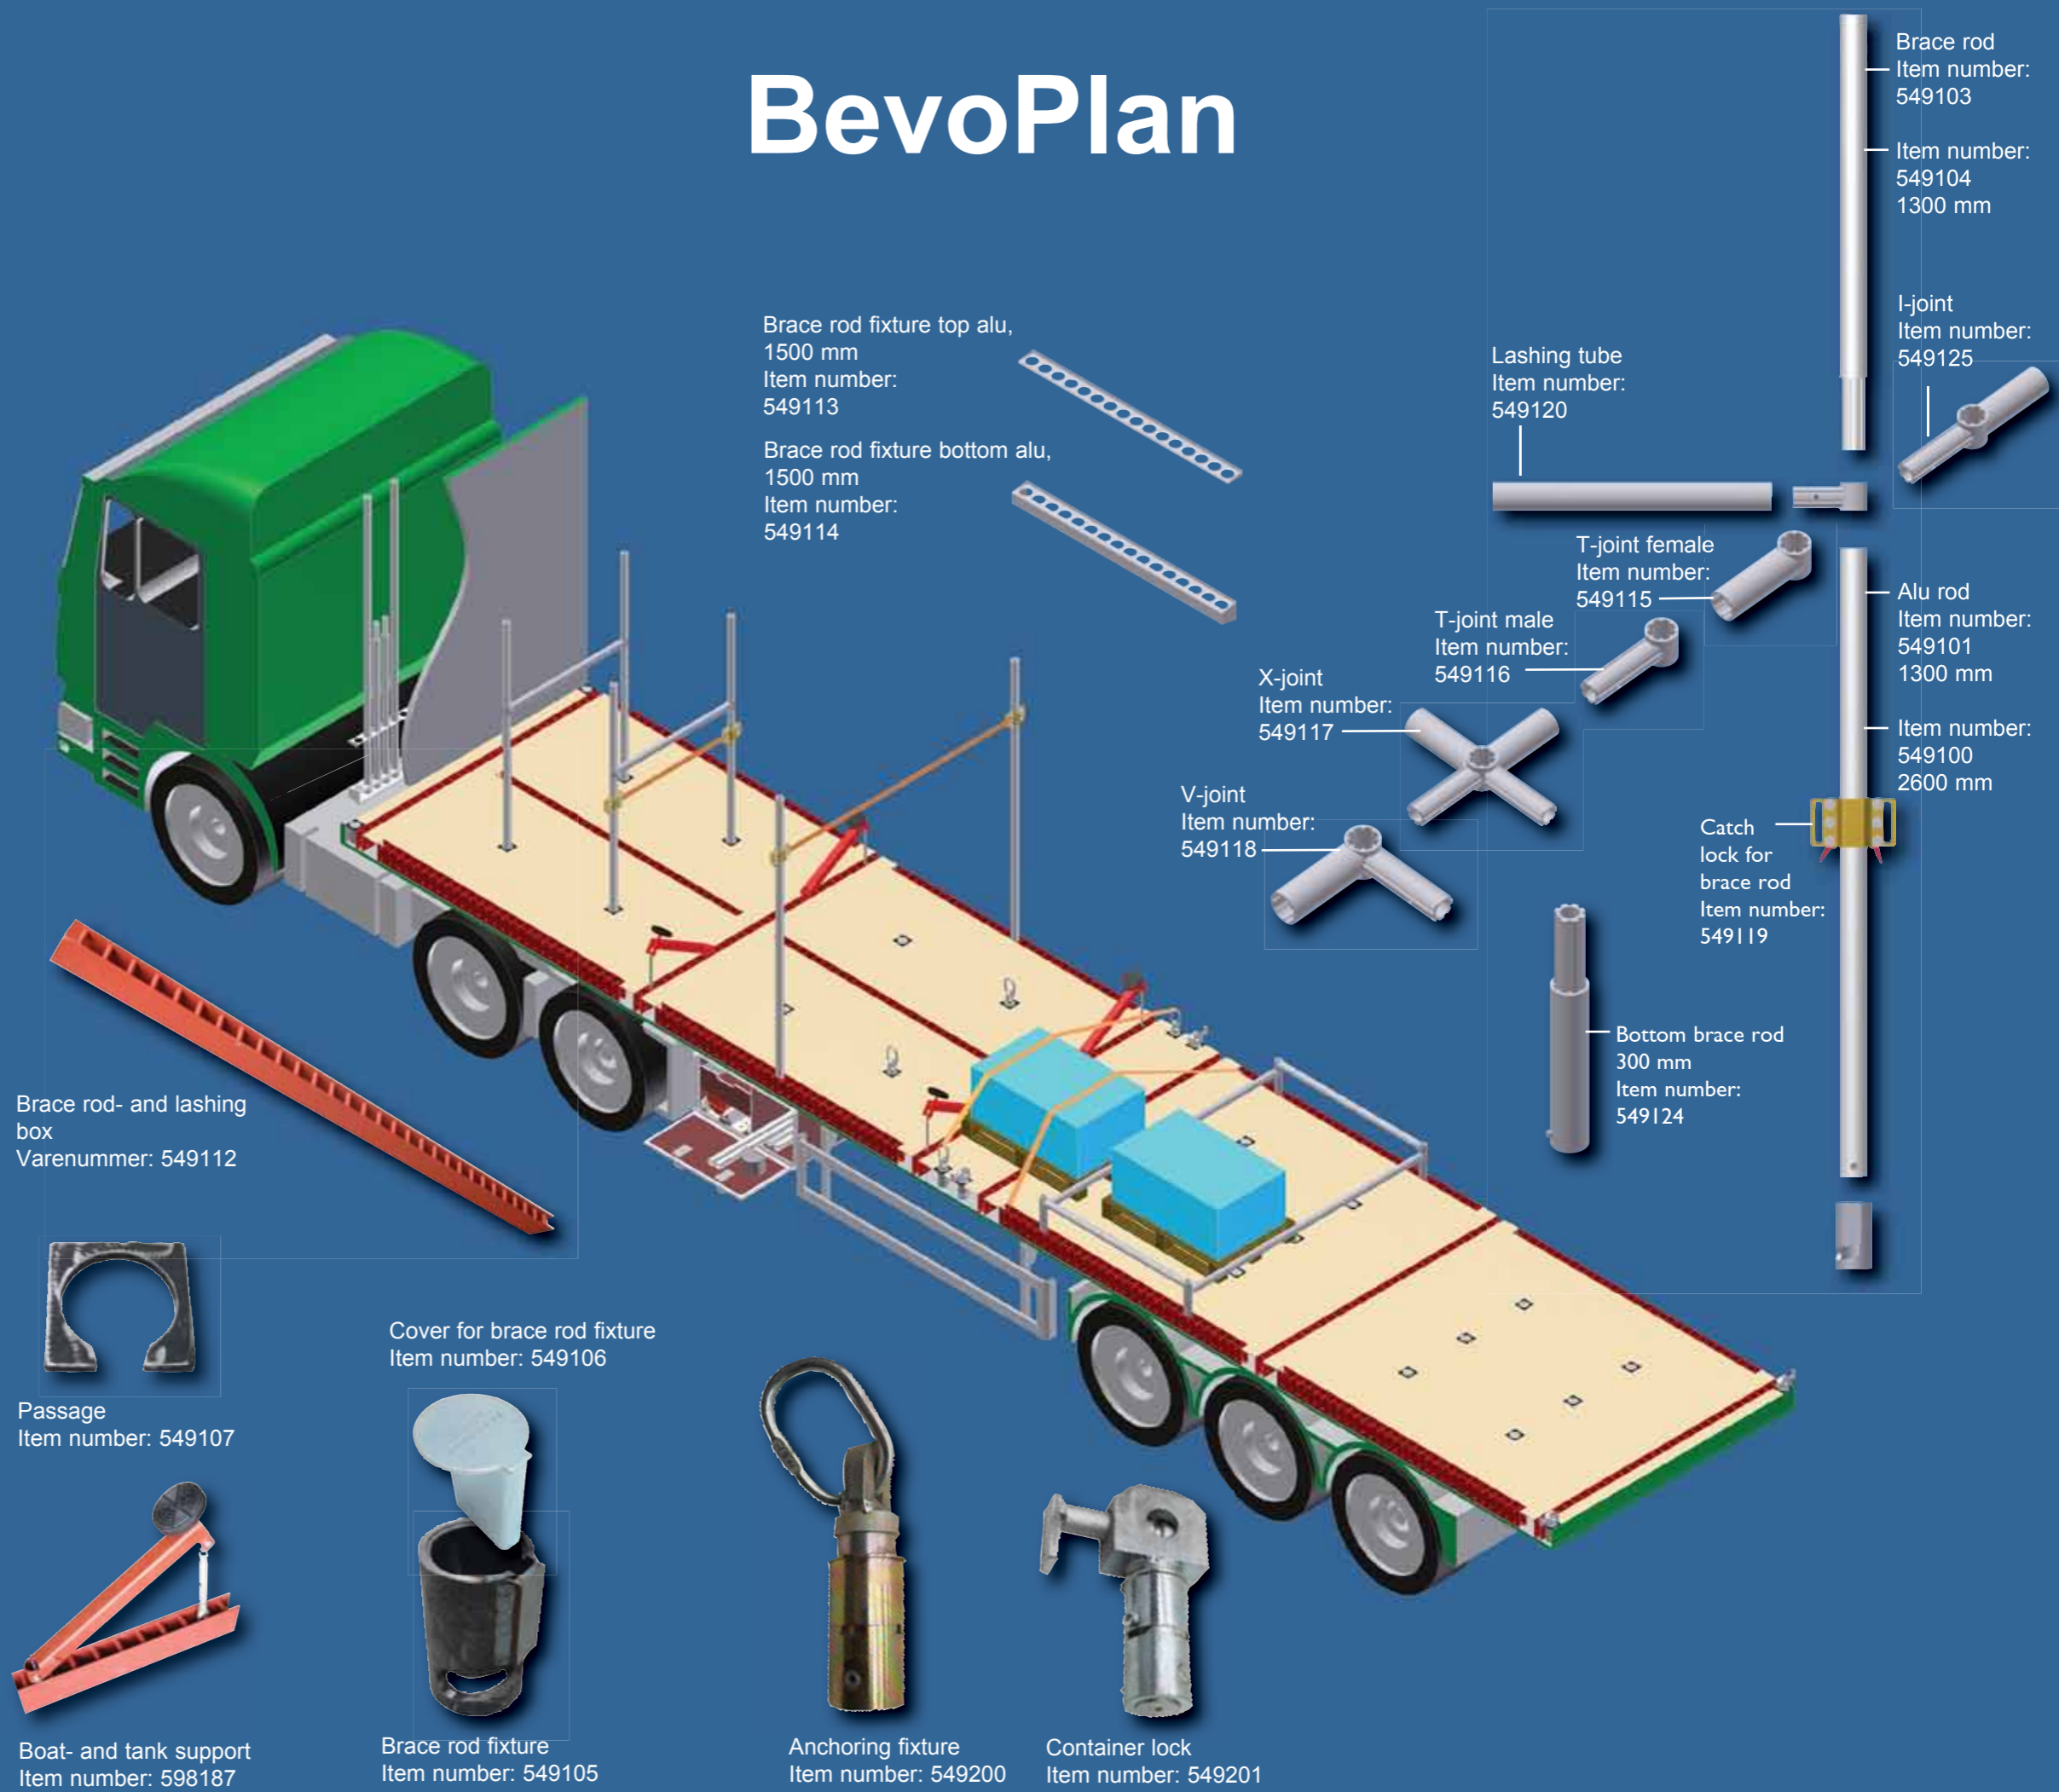

The main elements in BevoPlan are the brace rods of different types and lengths which can be secured to the truck body in different ways. It is the single fixture and the fixture box that ensures an endless number of combination options.

In addition, it is possible to get supporting legs for the removal of boats and other sorts of goods which need support, the belt fixture for the support and fixation of movables, individual cross beams for light goods and fixation as well as the container lock and loose lashing mountings.

It is possible to order individual shelves and shields in aluminium or veneer, and to create individual banners and tarps for covering top and sides, which can be combined with advertisement texts for messages.

It is also possible to order fixtures and storage boxes for brace rods and accessory equipment in different shapes adapted to the construction and need.

Contact BevoPlan for further information / inspiration through our website or our customer service and sales.
