## Instrument tables and cabinets

Wide range and new opportunities

# Instrument tables and cabinets

It is Bevola's intention to create a complete business, focusing on competitive prices, high quality and the most flexibility. We wish to help our customers create the most efficient value chain - i.e. the shortest possible distance between manufacturer and the finished solution, and thereby achieve high efficiency and great cost reductions. That is common sense and a better bottom line for everybody.

## Wide assortment and new possibilities

Bevola has a complete assortment of instrument tables and cabinets from the German company Marlen. Marlen develops their own products in collaboration with their manufacturers, resulting in a perfect fit and design. In addition, Marlen uses wood of a very high standard, meaning that the wood does not absorb the moisture from the cabin. Due to the excellent fit, both tables and cabinets are easy to mount. The quality is typical for German products, and you therefore get a product that you can benefit from for years. Our close collaboration with Marlen means that we can create specialized solutions, given that it is financially responsible.

For further information about products and new possibilities, contact Bevola.

### Environment

Instrument tables and cabinets are made from veneer, and are not for direct incineration, since both tables and cabinets are glued together and covered with plastic sheeting. Tables and cabinets can, however, easily be turned in to recycling centres, which will receive the products without any special considerations. Bevola tries to do stock and purchasing management as responsibly and possible, to avoid unnecessary transports and CO2 emission.
